Automation technologies

Overview of Cloud Manager platform automation options

DevOps teams use a variety of tools to automate the setup and administration of their data center runtime environments. NetApp supports many of these technologies for Cloud Manager and Cloud Volumes ONTAP automation. The tools are commonly based on an Infrastructure as Code (IaC) design.

Terraform

Terraform is an open-source orchestration tool which uses declarative configuration files. NetApp has created a Terraform provider you can use with Cloud Manager to automate and integrate Cloud Volumes ONTAP based on IaC. See [Terraform provider: netapp-cloudmanager](#) for more information.

Ansible

Ansible is an open-source configuration management tool based on the use of procedural configuration files.
